

Environmental Policy

Eurosyst company document

Commitment

Eurosyst recognises that security operations, travel, energy use, procurement and waste can affect the environment. We aim to reduce avoidable environmental impacts while maintaining safe and effective services.

Our approach

Comply with applicable environmental legislation and contractual requirements.

Reduce unnecessary energy, fuel, paper and material consumption where reasonably practicable.

Use digital processes and remote communication where appropriate.

Consider environmental performance when selecting equipment, suppliers and operational methods.

Manage waste responsibly and encourage reuse and recycling where practical.

Vehicles and travel

Operational travel is managed around service needs. We seek efficient routing, appropriate vehicle use and reduced unnecessary journeys where this does not compromise security or response requirements.

Continuous improvement

Environmental objectives will be reviewed periodically and updated as the business, technology and legal requirements develop. Employees are encouraged to identify practical opportunities to reduce waste and resource consumption.
